SHASHANK A KUMAR

US Citizen | +91 9865224126 | shashank7.cs@gmail.com | **Linkedin** | **Github**

EDUCATION

Master of Computer Science — **Rice University** — **Expected Fall 2027**
- Commencing Fall 2026

Bachelor of Engineering in Computer Science — **KPR Institute of Engineering and Technology** — **Nov 2022 – May 2026**
- Relevant Coursework: Data Structures, Design & Analysis of Algorithms, DBMS, AI & Machine Learning, Deep Neural Networks, Web Technologies, and Mobile Application Development

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript
Backend & APIs: FastAPI, SQLAlchemy, Node.js
Frontend: React, Redux, HTML, CSS, TypeScript
Databases: PostgreSQL, Redis, MongoDB
AI / ML: scikit-learn, TensorFlow, PyTorch
Agentic AI: LangChain, LangGraph, RAG, Ollama
MLOps: Kubernetes, vLLM, GitHub Actions
DevOps & Observability: Git, Docker, AWS

EXPERIENCE

Software Development Intern — **Genworx AI** — **Oct 2025 – Jan 2026**
- Architected a 5-agent LLM pipeline (orchestrator → genre analyzer → character agent → plot agent → writer) cutting story generation time from 3–4 hours of manual effort to under 15 minutes.
- Implemented structured output validation and inter-agent context passing to maintain narrative consistency across chapters, serving 30 end-to-end story generation requests during the internship.

Data Science Intern — **Ether InfoTech** — **Jan 2024 – Feb 2024**
- Engineered an LSTM-based stock price forecasting model trained on up to 10 years of OHLCV data across 15 ticker symbols, achieving a test-set MAE of ~2.8% — outperforming a baseline moving-average model by 31%.
- Reduced model training time by 25% by cutting input dimensionality from 47 to 19 features through correlation-based selection and batched sequence preprocessing, without degrading forecast accuracy.

PROJECTS

AI Finance Tracker (Github) | React, Python, FastAPI, PostgreSQL, Celery, Redis, Ollama

- Engineered a full-stack finance platform with JWT auth, multi-account transaction management, and bill OCR — processing receipts in under 1.2 seconds per document with 94% field extraction accuracy
- Built a context-aware Financial Copilot on Ollama with a Redis-backed conversation memory engine, enabling multi-turn financial Q&A with goal-linked spending recommendations.

AI Powered Resume Evaluator (Github) | Python, Ollama, LangChain, FastAPI, React, PostgreSQL

- Built an LLM-as-judge scoring engine using Ollama (DeepSeek + Gemma) evaluating resumes across 8 dimensions — skills match, ATS compatibility, impact language, formatting, keyword density, and more.
- Validated against 20+ real resumes with ~85% agreement with human reviewers; automated end-to-end feedback generation with role-specific improvement suggestions.
